

# Project Title

Team Name

01/10/2021

Project final report should be written in **R Markdown**. It can be in **.pdf** output or **.html** output. There is no restriction on the output format since the final report may involve interactive plots etc. The final report should be at most 30-pages long. All team members should be involved in the preparation of the project final report. Project final reports should present appropriate details on the following topics (please note that other than Title, Team members, and Conclusion sections, order does not need to necessarily be in the order seen below):

- Project title page (including project title and team members)
- Project Description
- Project goal & social problem addressed
- Project data & access to data
- Actions taken (data importing, cleaning, reshaping, exploring, visualizing etc) along with results
- Results and Discussion
- Conclusion
- Please provide url address of your project deployed at **GitHub** pages under GitHub Classroom of MAT381E organization in Conclusion.
- The address should be similar to this: [https://github.com/MAT381E-Fall21/final-project\\_teamname](https://github.com/MAT381E-Fall21/final-project_teamname).
- References

Project final report should be prepared collaboratively.

**Cautionary notes:** 1) Project final reports will not be accepted after deadline. 2) You should download **R Project** on **GitHub** to your local computer, do the changes as needed, delete all the files you have not used to produce your report, and finally commit and push all the required files (including **.Rmd** files) just before your oral presentation (June 29, 2021 or June 30, 2021) via GitHub Classroom of MAT381E organization.
